

QUAD ROLLER

SS10000 Sliding Door Rollers

Anthony Innovations' SS10000 Quad sliding door roller is tested and proven to move 400kg panels.

Capable of moving 400kg panels, this product is in a league of its own. The 4 wheel roller assembly equally distributes the weight across each wheel ensuring less resistance, smoother operation, and limits track wear. With all stainless steel components this product provides the ultimate corrosion resistance.

Comes with:

- I 10 year warranty for peace of mind.
- I The confidence of product testing to 50,000 cycles and capable of moving 400kg panel weights.

Anthony Innovations has been backing up our client's reputations since 1951 with leading window and door hardware products that perform, year after year. We partner with quality system designers and fabricators throughout the world who want to protect their reputations by only using the best.

- | Plastic wheels resist track wear.
- | Easily serviceable once installed.
- | Reduced noise and smoother operation.
- | Wheels are protected to reduce wheel damage during installation, transportation, and building site contaminants.

See what our customers have to say:

To Whom it may concern,

Intext specialises in the supply and installation of architectural residential windows and doors for high-end clients. The majority of the doors we manufacture are large sliding panels that can weigh up to 300kgs. The Anthony's SS10000 roller has allowed us to manufacture these very large door panels, confidently knowing that our clients can easily operate the doors even when flush pulls are fitted. It has improved immeasurably the way our heavy doors roll and has helped us secure new work with our clients impressed with the ease our sliding doors move from a static position. It is impressive how easy it is to move a 300kg door and how smoothly it operates.

I recommend the Anthony's SS10000 door roller to any serious manufacturer of heavy architectural sliding doors.
